

Text Modules

- Using the global search *ASDC Text module list*
- Use *+New* to create a new text module
- Define a unique code
- Store a meaningful description
- Choose default tables
- Define placeholders
- Define values for placeholders at line level
- Via menu bar > *test text module* the text module can be validated
- Via menu bar > *Create formula*, the text module is included as a formula in the Formulas report and can now be used for the Configuration report
